1. **Title:** Take a Step into a Miniature Lifestyle
2. **A logo**.

3. **Draft of writing for home page introduction**.

As you may know the world's population is constantly growing at a 1.1% rate per year. This means that the population is growing roughly about 83 million people annually, roughly 1.5 million people each week, or about 220,000 people per day. This is equivalent to about 9,000 or more people every hour, or 150 more people per minute. Growing from 1 billion in the 1800's to more than 8.1 billion now in 2024. With this very rapid population growth, “demographers expect the world population to peak by the end of this century” (ourworldindata.com). While some may overlook this information it should be noted that information like this tells the future. Since our human activity is continuously growing this means that Earth’s resources are constantly diminishing. With “the overconsumption of natural resources like forests, water, and minerals exceeding the planet's ability to replenish them, leading to environmental degradation

and potential future shortages if not addressed effectively; this means we are using more resources than the Earth can regenerate, essentially "spending" the planet's natural capital faster than it can be replenished" (DepletionStatics).

Although let's not panic just yet, the pure duty of this website is to expose some of the government's secrets in regards to what's next? How will the government deal with the rapid diminish in our resources? Well, I know you may have heard about the conspiracies on how 'The Simpsons' show tells many predictions about the future that have ended up being true. Well the movie *Downsizing* directed by Alexandra Payne is spot on about our future. The movie is about a couple who decide "to undergo a process in which scientists shrink people down to miniature size to live in small communities. The irreversible procedure allows the people to gain wealth and a life of leisure while helping to cut down on the consumption of natural resources" (GoogleAboutDownsizing). This may seem like an absurd idea, but experimentation has already occurred in Miniature Genes Clinical Laboratory. I am Daniel Chester; a scientific researcher from Miniature Genes Clinical Laboratory here to let you know that **THE PROCEDURE** is almost ready.

4. **A draft of writing for the "about" page.**

I am Daniel Chester; a scientific researcher from Miniature Genes Clinical Laboratory here to give the world a heads up about our future advances. I have been working for Miniature Genes Clinical Laboratory for several years now and have witnessed every trial and tribulation. Here's a bit more about what we stand for.

Miniature Genes Clinical Laboratory is a lab site that has been working on a solution for the overpopulation problem here on Earth. Through various trials and tribulations, the lab has

decided that the best decision to move forward with — is the shrinking of human subjects. Smaller humans, ultimately means a smaller amount of resources being used. It's like comparing the amount of resources we use, to the amount an ant uses. While this may sound absurd, Miniature Genes Clinical Laboratory was created to specialize in the miniature lifestyle and the safest method to make it happen. All the hard work and dedication is not only for a safe procedure when it comes to shrinking humans, but also for the future of the world. Currently the subjects in trial have been shrunk, but only to about 1 foot tall. The desirable size is 5 inches, however it should be noted that all subjects apart of this trial are still completely healthy.

5. **3 pieces of "research"-**
    - "This enormous total growth works out to eye-popping numbers: 1.5 million more people added to the planet every week. Over 220,00 people per day. That is 9,000 more people every hour, or 150 more people per minute. Almost 3 more people every second" (GlobalPopulationSpeakOut).
    - "But after a period of very fast population growth, demographers expect the world population to peak by the end of this century"(ourworldindata)
    - "Ecological overshoot occurs when humanity's demand on nature exceeds what ecosystems can supply. In other words, when we use more natural resources than the biosphere can regenerate"(TheWorldCounts).
    - "to undergo a process in which scientists shrink people down to miniature size to live in small communities. The irreversible procedure allows the people to gain wealth and a life of leisure while helping to cut down on the consumption of natural resources" (GoogleAboutDownsizing).

    - *Downsizing* Dir. Alexandra Payne

6. **Any images that will be included in your "research".**

Kristen Wiig and Matt Damon star in Alexander Payne's "Downsizing." Photographed by Paramount Pictures/Everett

Paramount Pictures

7. **Any videos or audio that will support your research**.

- Overpopulation Video Link : https://www.youtube.com/watch?v=mRcxGJcBDVo

8. **Product:**

The "product" will be the chance for people to sign up in advance for their miniature lifestyle procedure.

9. **A draft writing of the conclusion**, which might be a sort of call-to-action for the audience.

While it is very risky for me to be exposing this information, I just needed to let humanity know that the time is coming. We will not have to fight over toilet tissue like during the 2020 COVID pandemic — we won't have to worry about inflation anymore. At a miniature size our resources will be unlimited and the population can grow as much as it wants. Starting in 2030, this new life of living miniature will be available to all. While it is purely your decision, just know that this may be the start to saving the world. That's why **YOU SHOULD TAKE A STEP INTO A MINIATURE LIFESTYLE!**
